

FOR EDTECH COMPANIES

Build what districts actually adopt.

Your software is not failing in the build. It is failing in the district. We have been the district-side buyer, and when your team is stretched we build alongside you.

WHERE IT GOES WRONG

Money that dried up

Bought with funding that paid for the last three years and is now gone.

Staff who turned over

Rolled out to people who were going to run it and have since moved on.

Quietly unused by March

And software nobody opens does not get renewed.

WHY EDVIZION

35+ years

in software delivery: a developer, then director and above, and a Certified Scrum Trainer® since 2006.

Since 2014

on the leadership team of Blueprint Education, an Arizona charter district. The half almost no agile coach has.

Six systems

built and run by us inside a real district. We know what a registrar will actually open on a Tuesday.

ADVISE

- **Coaching.** For product and engineering teams, from a Certified Scrum Trainer.
- **Discovery.** Will a district adopt this, and who has to say yes?
- **Training.** What school and district buyers actually care about.
- **Fractional seat.** In the room when the decisions get made.

BUILD WITH YOU

- **Engineering capacity.** LMS and SIS integrations, data pipelines, the item that keeps slipping.
- **Product and delivery.** A product owner, Scrum Master or delivery lead, embedded.
- **District implementation.** Your customers rolled out and in use before renewal.
- **Licensing.** Six systems we built and ran in a district, inside your product.

Two senior people, not a bench. Contract with us directly, as a subcontractor under your contract, or as a teaming partner on a bid or RFP. We build with the companies that serve districts, not for districts directly.

What is stalling?

Book 30 minutes with Michael Vizdos. Bring what is stuck; you leave knowing whether we are the right help.
